	N.B.: -1. write problem statement on Answer sheet, then write implementation steps in detail 2. Assume suitable data if necessary.			
	Design and develop SQL statements for below problem statement. 1. Create Table: i) Teacher_info{Teacher_id, Teacher_Name, Dept_Name, Salary, Subject_taught} .ii) Student_info{Roll_No, Student_Name, Dept_Name, Class, Result} 2. Insert 5 records in both above collections. 3. Find student name whose result is above 60% 4. Find student name whose name ends with "i" 5. Display name of teacher whose salary is between 20,000 to 50000. 6. Add "Join_Date" field in Teacher_info table. 7. Add "Address" field in Student_info table. 8. Use "DROP" command 9. Find Name of students who lives in city "Pune" 10. Find Average salary of all teachers

	N.B.: -1. write problem statement on Answer sheet, then write implementation steps in detail 2. Assume suitable data if necessary.			
	Execute DDL statements which demonstrate the use of views. Try to update the base table using its corresponding view. Also consider restrictions on updatable views .			

-- Step 0: Create and Use Database

```
CREATE DATABASE View_DB;
```

```
USE View_DB;
```

-- Step 1: Create the Employee Table

```
CREATE TABLE Employee (
    Emp_id INT PRIMARY KEY,
    Emp_name VARCHAR(50),
    Dept_no INT,
    Salary INT
);
```

-- Step 2: Insert Sample Data

```
INSERT INTO Employee VALUES (101, 'Rahul', 1, 12000);
INSERT INTO Employee VALUES (102, 'Priya', 2, 9500);
INSERT INTO Employee VALUES (103, 'Amit', 1, 15000);
INSERT INTO Employee VALUES (104, 'Neha', 3, 8000);
INSERT INTO Employee VALUES (105, 'Sanjay', 2, 13500);
```

-- Step 3: Create a View to Show Only Employees with Salary Above 10,000

```
CREATE VIEW HighSalaryEmployees AS
SELECT Emp_id, Emp_name, Salary
FROM Employee
WHERE Salary > 10000;
```

-- Step 4: Query the View

```
SELECT * FROM HighSalaryEmployees;
```

-- Step 5: Attempt to Update the Base Table Using the View

```
UPDATE HighSalaryEmployees
```

```
SET Salary = 16000
```

```
WHERE Emp_id = 101;
```

-- Step 6: Check the Result in Base Table

```
SELECT * FROM Employee WHERE Emp_id = 101;
```

-- Step 7: Demonstrate Restriction on an Updatable View

-- This view is NOT updatable because of the aggregation function (AVG)

```
CREATE VIEW DeptwiseAvgSalary AS
```

```
SELECT Dept_no, AVG(Salary) AS Avg_Salary
```

```
FROM Employee
```

```
GROUP BY Dept_no;
```

-- This will FAIL: trying to update a non-updatable view

```
UPDATE DeptwiseAvgSalary
```

```
SET Avg_Salary = 14000
```

```
WHERE Dept_no = 1;
```

<b>(8)</b>	<b>GHRCEM , Practical Exam. 2025</b>	
	<b>Sub: DBMS</b>	<b>Class: TY BTECH AI/AIML</b>
	<b>Duration : 2 Hrs</b>	
	<p>N.B.: -1. write problem statement on Answer sheet, then write implementation steps in detail            2. Assume suitable data if necessary.</p>	

Implement following Queries in SQL database.

1. Create Teacher dB.
2. Create table: Teacher\_info{Teacher\_id, Teacher\_Name, Dept\_Name, Sal, status}
3. Insert below values in respective fields of ‘Teacher\_info’ collection  
 (Pic001, Ravi, IT, 30000, A)  
 (Pic002, Aarti, IT, 40000, A)  
 (Pic003, Narendra, COMP, 20000, B)  
 (Pic004, Swati, ENTC, 15000, C)  
 (Pic005, Sampada, IT, 35000, A)  
 (Pic006, Mihir, IT, 25000, B)  
 (Pic007, Malati, ENTC, 36000, A)
4. Display all contents of ‘Teacher\_info’.
5. Display information of teacher whose salary is 35000.
6. Update Salary 25000 of teacher whose id is Pic004.
7. Display information of teacher whose status is either A and Salary is 15000.
8. Insert column Teacher\_phone as new column.
9. Enter 2 phone no for any one row of table.
10. Create Index on teacher\_Name column.

-- 1. Create Teacher database (database creation syntax depends on the system)

```
CREATE DATABASE TeacherDB;
```

-- Use the new database

```
USE TeacherDB;
```

-- 2. Create table: Teacher\_info

```
CREATE TABLE Teacher_info (
  Teacher_id VARCHAR(10) PRIMARY KEY,
  Teacher_Name VARCHAR(50),
  Dept_Name VARCHAR(20),
  Sal INT,
  status CHAR(1)
);
```

-- 3. Insert the given values into Teacher\_info

```
INSERT INTO Teacher_info VALUES ('Pic001', 'Ravi', 'IT', 30000, 'A');
```

```
INSERT INTO Teacher_info VALUES ('Pic002', 'Aar ', 'IT', 40000, 'A');
```

```
INSERT INTO Teacher_info VALUES ('Pic003', 'Narendra', 'COMP', 20000, 'B');
INSERT INTO Teacher_info VALUES ('Pic004', 'Swa ', 'ENTC', 15000, 'C');
INSERT INTO Teacher_info VALUES ('Pic005', 'Sampada', 'IT', 35000, 'A');
INSERT INTO Teacher_info VALUES ('Pic006', 'Mihir', 'IT', 25000, 'B');
INSERT INTO Teacher_info VALUES ('Pic007', 'Mala ', 'ENTC', 36000, 'A');
```

-- 4. Display all contents of Teacher\_info

```
SELECT * FROM Teacher_info;
```

-- 5. Display information of teacher whose salary is 35000

```
SELECT * FROM Teacher_info WHERE Sal = 35000;
```

-- 6. Update Salary to 25000 for teacher whose id is Pic004

```
UPDATE Teacher_info
```

```
SET Sal = 25000
```

```
WHERE Teacher_id = 'Pic004';
```

-- 7. Display information of teacher whose status is 'A' and Salary is 15000

```
SELECT * FROM Teacher_info
```

```
WHERE status = 'A' AND Sal = 15000;
```

-- 8. Insert column Teacher\_phone as new column

```
ALTER TABLE Teacher_info
```

```
ADD Teacher_phone VARCHAR(20);
```

-- 9. Enter 2 phone numbers for any one row (use comma separation or array/json if supported)

```
UPDATE Teacher_info
```

```
SET Teacher_phone = '9999999999,8888888888'
```

```
WHERE Teacher_id = 'Pic001';
```

-- 10. Create Index on teacher\_Name column

```
CREATE INDEX idx_teacher_name
```

```
ON Teacher_info(Teacher_Name);
```

Duration : 2 Hrs

**Create following customer and loan table****CNO CNAME            ADDR            CITY****101 Dhiraj            kharadi            pune****102 Patil            kalptaru            pimpri****103 Abhay            west            pimpri****104 Raghav            rt            nashik****105 Dhanu            bvh            pune****LNO    LAMT    CNO****1    120000    101****2    100000    102****3    30000    103****4    120    104****5    1000000    105**

Implement following queries:

1. Add Phone\_No column in customer table with data type int.
2. Delete the details of customer whose loan\_amt<1000.
3. Find details of all customers who are staying at Nashik
4. List all customers whose name starts with 'D' character.
5. Find loan taken by customer "102"
6. Finad total loan given by bank.

-- Step 1: Create and use database

CREATE DATABASE IF NOT EXISTS dbms\_exam1;

USE dbms\_exam1;

-- Step 2: Create Customer table

CREATE TABLE Customer (

```
CNO INT PRIMARY KEY,  
CNAME VARCHAR(100) NOT NULL,  
ADDR VARCHAR(100),  
CITY VARCHAR(100)  
);
```

-- Step 3: Create Loan table

```
CREATE TABLE Loan (  
LNO INT PRIMARY KEY,  
LAMT INT,  
CNO INT,  
FOREIGN KEY (CNO) REFERENCES Customer(CNO)  
);
```

-- Step 4: Insert sample records into Customer

```
INSERT INTO Customer (CNO, CNAME, ADDR, CITY) VALUES  
(101, 'Dhiraj', 'kharadi', 'pune'),  
(102, 'Patil', 'kalptaru', 'pimpri'),  
(103, 'Abhay', 'west', 'pimpri'),  
(104, 'Raghav', 'rt', 'nashik'),  
(105, 'Dhanu', 'bvh', 'pune');
```

-- Step 5: Insert records into Loan

```
INSERT INTO Loan (LNO, LAMT, CNO) VALUES  
(1, 120000, 101),  
(2, 100000, 102),  
(3, 30000, 103),  
(4, 120, 104),  
(5, 1000000, 105);
```

-- Step 6: Verify inserted data

```
SELECT * FROM Customer;  
SELECT * FROM Loan;
```

---

-- REQUIRED QUERIES

---

-- Q1. Add Phone\_No column in customer table with data type int

```
ALTER TABLE Customer ADD Phone_No BIGINT;
```

-- Q2. Delete details of customer whose loan\_amt < 1000

-- First delete from Loan (child)

```
DELETE FROM Loan
```

```
WHERE LAMT < 1000;
```

-- Then delete from Customer (parent)

```
DELETE FROM Customer
```

```
WHERE CNO NOT IN (SELECT CNO FROM Loan);
```

-- (Also delete corresponding loan record to maintain referential integrity)

```
DELETE FROM Loan WHERE LAMT < 1000;
```

-- Q3. Find details of all customers who are staying at Nashik

```
SELECT * FROM Customer
```

```

**18****Sub: DBMS****GHRCEM , Practical Exam. 2025****Class: TY BTECH AI/AIML****Duration : 2 Hrs**

1. Consider the following table:

Order:

Order_ID	CustomerID	OrderDate
10308	2	2018-09-18
10309	3	2018-09-19
10310	4	2018-09-20

Customer

CustomerID	CustomerName	ContactNo	State
1	Vijay	9873456782	Maharashtra
2	Sanket	1234567890	Maharashtra
3	Abin	9812345607	Kerla
4	Ram	1209876543	Chennai

1. Create Above order and Customer table.
2. Perform Inner Join, Left Outer Join, Right Outer Join.
3. Find Name, and Order date of Customer who live in state Maharashtra.
4. Add column contact no in customer table and insert record for all customers.
5. Find name of states which start with letter ‘M’.
6. Find Orderid and Customer name of Customers who live in state “Maharashtra”
7. Display customer table state wise in descending order.
8. Find the contact no which consist of letter “45”.

-- Step 1: Create / use database

```
CREATE DATABASE IF NOT EXISTS dbms_exam;
```

```
USE dbms_exam;
```

-- Step 2: Clean old data if rerun

```
DROP TABLE IF EXISTS Orders;
```

```
DROP TABLE IF EXISTS Customer;
```

-- Step 3: Create Customer table

```
CREATE TABLE Customer (
```

```
CustomerID INT PRIMARY KEY,
```

```
CustomerName VARCHAR(50) NOT NULL,
```

```
ContactNo BIGINT,
```

```
State VARCHAR(50)
```

```
);
```

```
-- Step 4: Create Order table
```

```
CREATE TABLE Orders (
```

```
Order_ID INT PRIMARY KEY,
```

```
CustomerID INT,
```

```
OrderDate DATE,
```

```
FOREIGN KEY (CustomerID) REFERENCES Customer(CustomerID)
```

```
);
```

```
-- Step 5: Insert data into Customer
```

```
INSERT INTO Customer (CustomerID, CustomerName, ContactNo, State) VALUES
```

```
(1, 'Vijay', 9873456782, 'Maharashtra'),
```

```
